

TROUBLE SHOOTING

Frost Free Refrigerator		
Sr. No	Symptoms	Checks
1	When you hear a sound of water flowing inside the refrigerator	1) The sound is due to movement of the refrigerant and not a malfunction
2	You notice a foul odour inside the Refrigerator	1) Do you have spoilt food in the refrigerator
		2) Is the food stored in sealed container?
		4) Has fluid collected in the bottom of the vegetable bin?
		5) Has the freezer evaporation tray at the back of the appliance become dirty.
3	Frost develops inside the freezer	1) Does the door seal tightly?
		2) Are the evaporation slots clogged?
		3) Is there enough space for efficient air circulation?
4	Dew develops on the vegetable compartment	1) Does the door seal tightly?
		2) Have you left the door open for a long time?
		3) Is liquid stored without a cover?
5	Freezer is not operating or the food does not freeze sufficiently	1) Is the plug properly connected?
		2) Are the temperature controls set properly?
		3) Is the appliance exposed to direct sunlight or installed near a heater?
		4) Does the appliance have enough clearance from the wall in all directions.
6	Food freezes in the refrigerator	1) Are the temperature controls set properly?
		2) If the food is juicy or very moist, is the temperature control set to seven?
		3) Is the ambient temperature too low?
7	There is noise from the unit	1) Is the refrigerator installed on a flat stable surface?
		2) Is the appliance positioned too close to the wall?
		3) Are there any objects behind or under the refrigerator?
8	Rear or side panel of the refrigerator	1) Is a radiation (air ventilator/ cooler) pipe installed?
		2) Is the ambient temperature high?
		3) Has dew formed on the outside of the appliance because of high humidity?
